

# Danfoss adds screw compressors to portfolio through strategic acquisition of Palladio Compressors

Nordborg | October 1, 2025

- Expansion of compressor portfolio supports large-scale HVAC/R systems with natural and low-GWP refrigerants
- Builds on a successful partnership with to advance high-lift heat pumps and large cooling applications
- Seamless integration of the new Danfoss Screw range to meet diverse application needs

## Comprehensive expansion of compressor portfolio

In line with the Danfoss LEAP 2030 strategy, the acquisition of Palladio Compressors marks a significant expansion of our broad compressor portfolio, covering applications from light commercial comfort to large-scale process cooling, heating, and refrigeration. Over the past two years, Danfoss and Palladio have evaluated technological synergies, particularly in high-lift heat pumps. Integrating Palladio's screw compressors with our existing technologies promises competitive and advanced high-temperature solutions.

Fabio Klein, Divisional President, Danfoss Commercial Compressors, states:

"We are thrilled to welcome Palladio Compressors and its talented team into the Danfoss family. This acquisition broadens our technological capabilities and reinforces our commitment to decarbonization across industries. Palladio's advanced technology complements our portfolio, enhancing our compressor solutions for industrial heat pumps and large commercial and industrial refrigeration."

## Expanding market reach and competitive offerings

The Palladio range introduces state-of-the-art screw technology, addressing the limited offerings of advanced, non-captive screw compressors. We are well-positioned to support customers entering new markets with compressors utilizing natural and low-GWP refrigerants. The screw technology is particularly relevant for middle-range energy intensity applications. When deciding on a suitable compressor for their systems, our customers consider factors such as size, energy intensity, and payback period requirements. Our screw offering allows us to address this uncovered middle market segment.

The newly branded Danfoss Screw range will benefit from increased investment in R&D, production, and sales capacities, ensuring robust capabilities and market presence.

By integrating screw technology into its suite of compressors, valves, controls, heat exchangers, and sensors, Danfoss reinforces its commitment to delivering greener and more efficient solutions worldwide.

David Candio, CEO, Palladio Compressors, comments:

"Joining Danfoss is a transformative opportunity for Palladio Compressors. Together, we can leverage our combined expertise to drive innovation and expand our global reach. We are committed to providing increased options and seamless business continuity for our customers."

## Strategic focus and growth plans

Palladio Compressors will join the Danfoss Commercial Compressors division from October 1, 2025. This acquisition aligns with Danfoss' strategic focus to expand and grow market presence. We are committed to hiring additional personnel, including R&D specialists, engineers, and technicians, to support facility growth and innovation.

About Danfoss A/S: Danfoss engineers solutions that increase machine productivity, reduce emissions, lower energy consumption, and enable electrification.

Our solutions are used in areas such as refrigeration, air conditioning, heating, power conversion, motor control, industrial machinery, marine, and on- and off-highway equipment. We also provide solutions for renewable energy, such as solar and wind power, storage, heat recovery, as well as contribute to district energy solutions for cities.

Our innovative engineering dates back to 1933. Danfoss is family-owned and employs over 39,000 people. We create long-term value for our customers in more than 100 countries with a global footprint of around 100 factories.
